

The Reliability Pricing Model: Ensuring Adequate Supplies of Electricity

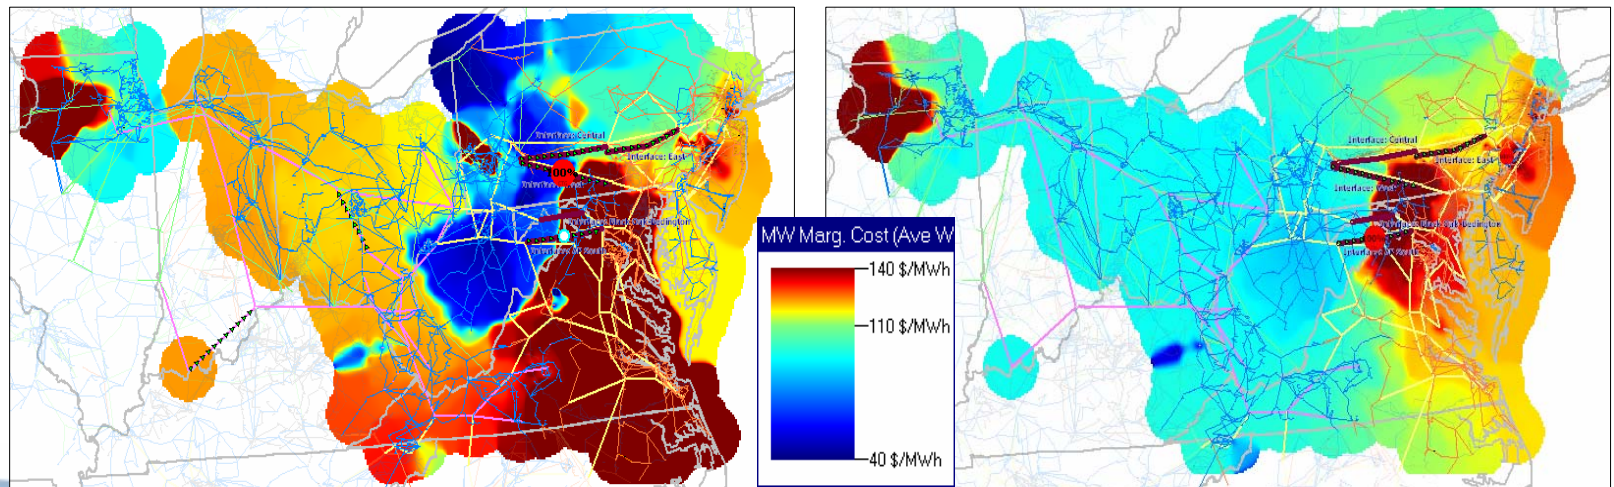

Tom Welch
Springfield, Illinois
December 1, 2005

- The Value of Markets
- The Problem to Solve
- The Reliability Pricing Model

- Lower energy prices across the expanded PJM region
 - ESAI's technical study: region-wide energy price without integration would be \$0.78/MWh higher in 2005 than with integration.
 - Spreading these savings over the total PJM RTO's energy demand of 700 terawatt-hours (TWh) per year yields aggregate savings of over **\$500 million per year.**

Pre-Integration Price Pattern

Post-integration Energy Price Pattern

May 2007 – June 2008

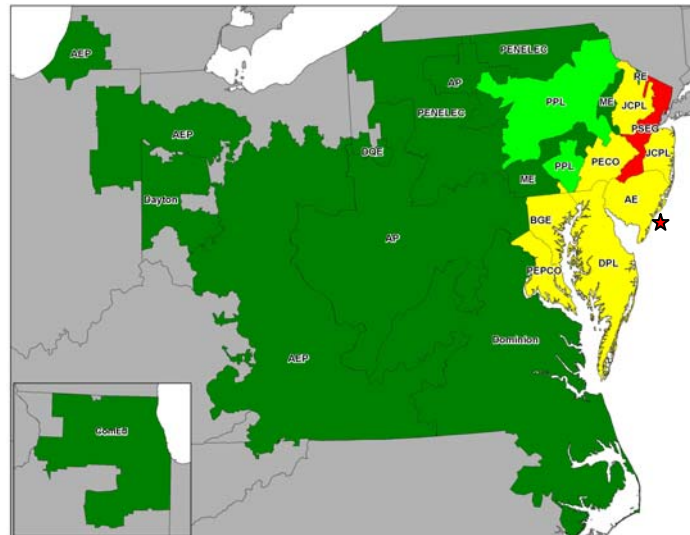

May 2008 – June 2009

May 2009 – June 2010

Value of Capacity (\$/MW-day)

★ The increase Capacity Import Capability into Southern NJ is due to Transmission upgrades effective May 2009

PJM Daily and Monthly Capacity Credit Market (CCM) performance: Calendar years 2000 to 2004

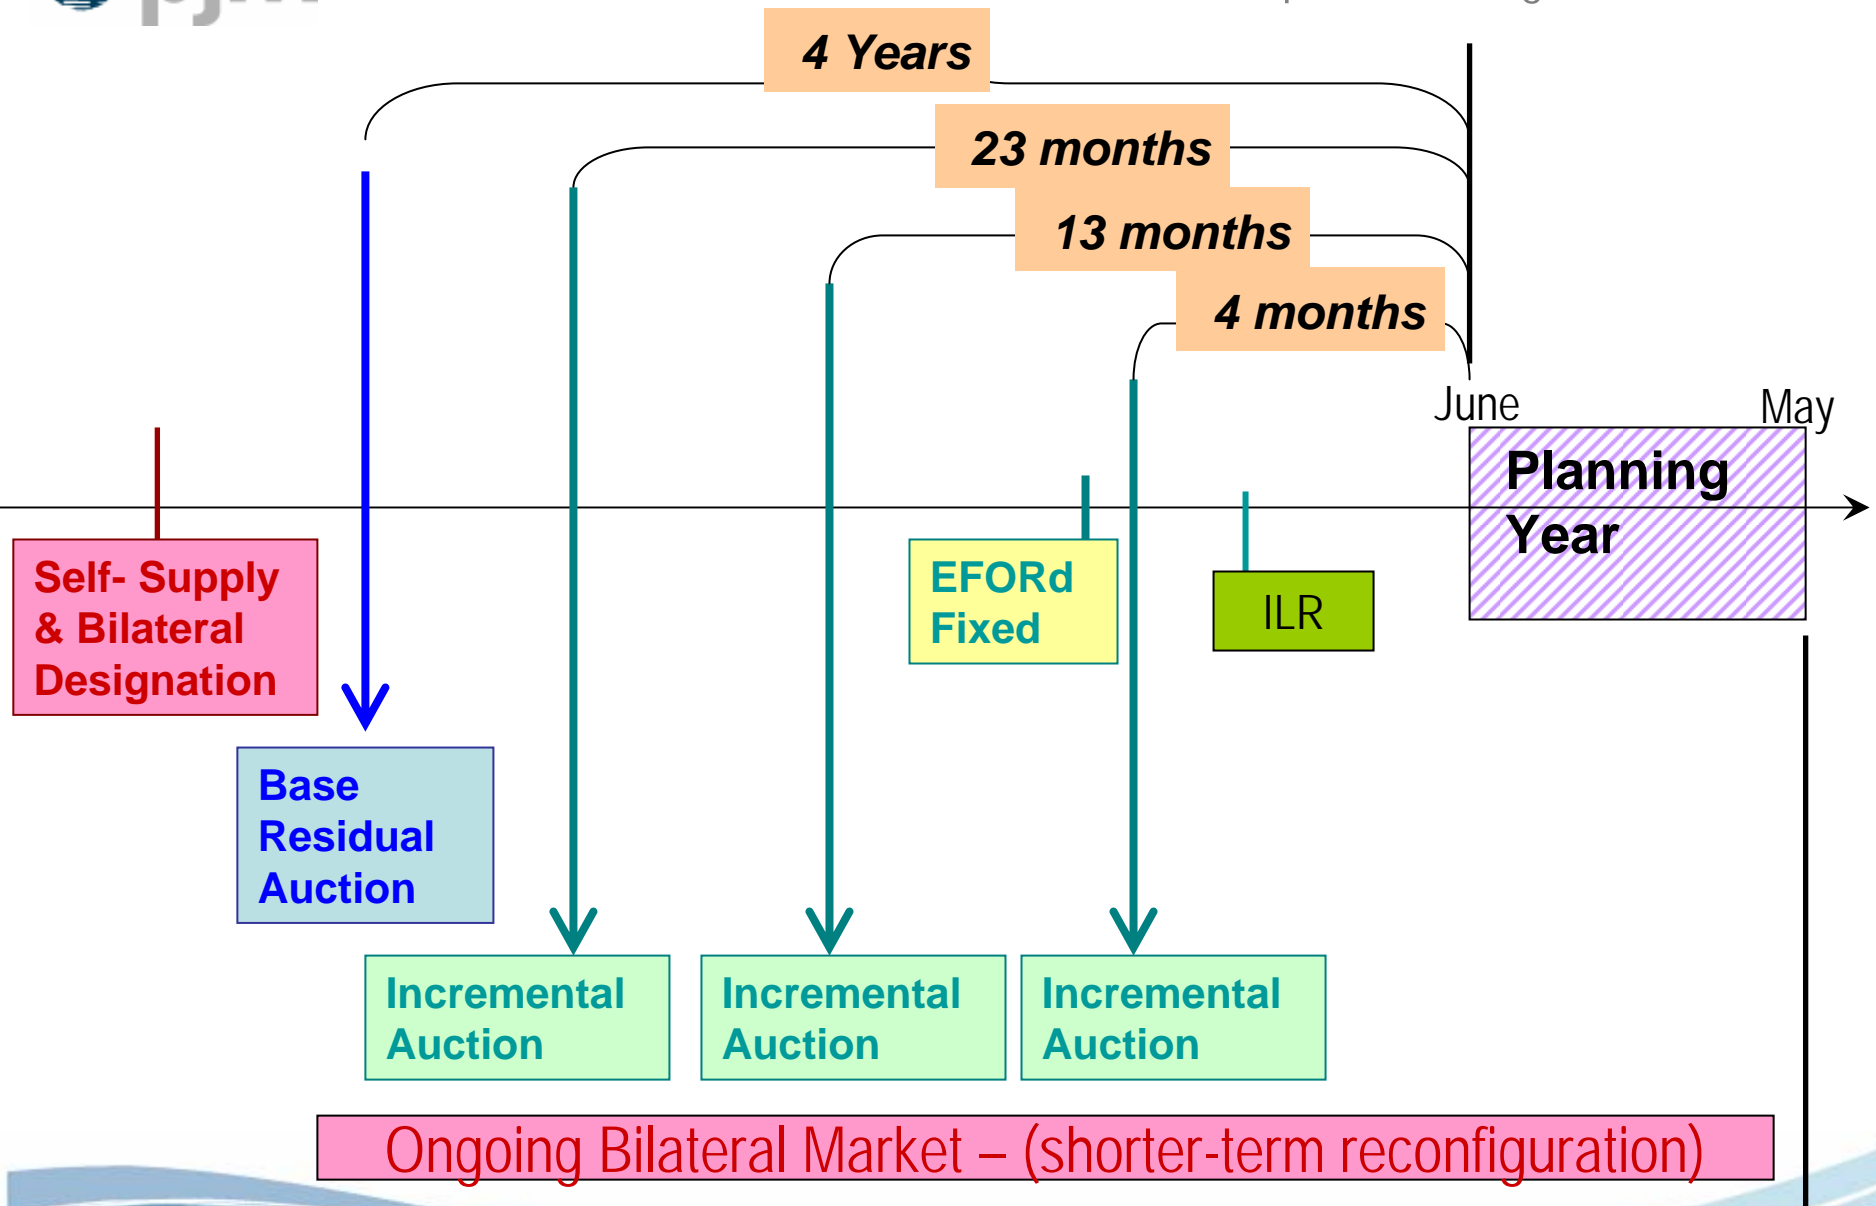

Source: PJM MMU 2004 State of the Market

PJM Net Revenue

Unit Type	20 Year Levelized Fixed Cost	Realistic Dispatch Average Net Revenue 1999 to 2004
Combustion Turbine (CT)	\$72,207	\$36,195
Combined Cycle (CC)	\$93,549	\$52,243
Pulverized Coal (CP)	\$208,247	\$137,015

Scarcity Prices: PJM Recommended Demand Curve vs. Vertical Demand Curve at Target Reserve

Capacity Prices: PJM Recommended Demand Curve vs. Vertical Demand Curve at Target Reserve
